Accepted MadLoop composite stability estimate
0-point pilot where N=100; not an independent true-error bou
u ū → Z g g [QCD]: accepted outputs
Fraction with metric > target Δ
CutTools (0 zeros)
Ninja (0 zeros)
COLLIER (0 zeros)
NinjaRS (0 zeros)
TIRust (13 zeros)
Paper reference 10⁻³ (different diagnostic)
N=100; resolution=0.01
Zero tails omitted on log y; zero metrics counted; missing values bounded
Ratio over Ninja
Masked: missing population or zero Ninja tail
Target relative metric Δ
