Accepted finite coefficient disagreement
0-point pilot where N=100; not an independent true-error bou
u ū → Z g g [QCD]: accepted outputs
Fraction with metric > target Δ
CutTools (100 zeros)
Ninja (0 zeros)
COLLIER (0 zeros)
NinjaRS (0 zeros)
TIRust (0 zeros)
Coefficient regression criterion 3×10⁻⁶
Ordinary-point target 10⁻⁸
N=100; resolution=0.01
Zero tails omitted on log y; zero metrics counted; missing values bounded
Ratio over Ninja
Masked: missing population or zero Ninja tail
Target relative metric Δ
